

Spyder

Spyder is a interactive development environment for [Python](#)

See also <https://github.com/spyder-ide>

Latest status: spyder can no longer be offered as a central install; the makers of the software only support local installs in a venv or conda environment.

We have spyder installed as part of the Anaconda environment module, but that only works in combination with the python version in that environment, so this might not be what you are looking for.
